Lexus Off-Roading with the GX & LX Overtrail

June 24, 2026

Image not found or type unknown

Join us in Palo Duro Canyon for this three-part video series as we put the GX Overtrail and LX Overtrail to the test, exploring the advanced engineering and technology that elevate Lexus off-road capability.

From full-time four-wheel drive, the Torsen Limited-Slip Differential, and selectable front and rear lockers to sophisticated suspension systems like E-KDSS, Adaptive Variable Suspension (AVS), and Active Height Control (AHC), these videos highlight the confidence, control and comfort built into every adventure.

We also dive into the off-road electronic aids that help drivers tackle challenging terrain, including Crawl Control, Turn Assist, Downhill Assist Control, Multi-Terrain Select, and Multi-Terrain Monitor, along with the specially co-developed Toyo all-terrain tires designed for the GX and LX Overtrail models.
